

Removing Restrictions from Border Control

Border Control Mobile

Smartphone and tablet based passport scanning and subject interrogation application designed for use with IMCS border management system

Passport Scanning

DPM Systems Border Control Mobile solution allows a wide range of Android-based smartphone and tablet devices to be used for portable travel document scanning. Arrival/departure record creation and watch list check functions in remote locations can be implemented at an affordable price.

Without requiring specialized external hardware modules, DPM Systems Border Control Mobile utilizes the smart device's built in camera to capture a high quality image of the full bio page from the travel document, and applies a fast and accurate OCR algorithm to extract the person and document information from the MRZ.

Subject Interrogation

Using either the information scanned from a travel document or details entered manually using the smart device's soft keyboard, real-time person information can be retrieved from the central IMCS border management system.

An operator can request current and historical watch list data, up to date passport and visa details, travel history and relevant address information using the smart device's connection to the cellular network.

Enhanced Mobility

The solution can be used remotely in any location, including cruise ships, ports and urban areas

Fast and Accurate

The solution delivers 99.9% accuracy when scanning travel document MRZ, completing in 2 seconds or less

Real-time Information

The solution operates on the cellular network to deliver 'live' person data from the central IMCS system
